CL = Caliper Brake FD = Front Drum Brake CB = 1 Speed Coaster Brake 2CB = 2 Speed "Kick-Back" Coaster Brake 3CB = 3 Speed Coaster Brake

## TRANSMISSION AND BRAKING TERMINOLOGY

Caliper Brake: A hand brake that squeezes the rim. Actuated by a lever on the handlebar.

Front Drum Brake: A hand brake that stops a brake rotor located within the front wheel. Actuated by a lever on the handlebar. Weather / dirt resistant.

Coaster Brake: Also known as a foot brake, it stops one of the rear wheels by pedaling backward. There are no gears to choose from.

2 Speed "Kick-Back" Coaster Brake: Lightly backpedaling switches the transmission from high to low gear and back. Backpedaling slightly harder actuates the rear brake and brings the tricycle to a stop. No shifter cable keeps the trike very clean!

3 Speed Coaster Brake: Same as a coaster brake, but there are three gears to choose from. Shifting is via a trigger (shift-lever) on the handlebar.

Freewheel: Freewheel models have no coaster brake. If you backpedal, the pedals will free-spin. There are no "speeds" on a freewheel tricycle.

Fixed-Drive Rear Gear: No coaster brake or freewheel. The rear axle moves however the pedals move. Good for some special-needs applications.

## OPTIONS FOR WORKSMAN PORTO-TRIKE – Personalize your trike to the max! (\* = can be used on WTX)
